MySql:

```
$ brew install mysql          # install
$ brew info mysql             # version, start
$ brew services start mysql
$ brew services list
$ mysql -u root               # root (no password)
>>> show databases;
>>> exit

$ mysql_secure_installation   # root (set password)
 - password: [root]
 - remove anonymous users: n
 - disallow root login remotely: n
 - remove test database and access to it: n
 - reload privilege tables now: y

$ mysql -u root -p
>>> password: [root]
```

```
$ conda create -n scrapy python=3 -y
$ conda activate scrapy
$ conda install -c conda-forge mysqlclient
$ make install    // pip install -r requirements.txt   | mysql
                                                        | mysql-connector
                                                        |      -python
```

```
$ mysql -u root -p
>>> show databases;
>>> use books;
>>> show tables;
>>> select * from books limit 5;
>>> drop table books;
```
